

APPENDIX 1A

ORIGINAL ABSTRACT OF THE DISCLOSURE (MARKED UP)

A lighting [box has a housing with an open front and open rear and a bar such as a standard schedule 40 pipe or 1 ½" or 1 5/8" pipe extending horizontally across the housing] project or device has a housing having multiple adjacent sides and a front, the housing being enclosed at least between par lamp and the diffusion element. Multiple par lights are mounted [on the bar] to a frame and positioned to send light out the front of the [box] device. The box also has a diffusion element (frame) disposed proximate its front end, and even may have multiple elements [including having one element at an angle] preferably spaced apart. The element or elements receive the light from the par lighting instruments and diffuse it to provide a soft projected light from the [box] device. In accordance with one aspect of the invention, this light may be used to provide diffused light as part of the key lighting for a stage or set, and may provide such soft projected lighting from a front (downstage) of the stage or set. The [box] frame also supports the housing. The frame may be rectangular. The device may also have a soft shell, may hang overhead, on a stand or by a rotatable yoke, and may have lights fixed therein. The [box] device may also have a rear cover.
